SKILLS

Languages: JavaScript, TypeScript, Java, C#, Python

Frameworks/Libraries: ReactJS, ReactNative, Blazor WebAssembly (.NET 9), ASP.NET, Node.js, Redux, Material UI, Chakra UI, HTML/CSS, Tailwind CSS, Bootstrap, Jest, Spring Boot, Spring MVC, Spring MicroService

Development Tools: Vite, SignalR, WebSocket, REST APIs, Apache

Database: MySQL, SQL, DynamoDB, GraphDB, MongoDB, OpenSearch (Elasticsearch)

Cloud Platforms: Azure (incl. Azure AI Foundry, Azure Communication Services, Azure DevOps), AWS (Amazon Web Services)

Other Technology: Serverless, Bot Framework, Jira, Trello, GitHub, GitLab, Bitbucket, Microsoft Office

Tools: IntelliJ IDEA, WebStorm, Xcode, Android Studio, Visual Studio Code

Soft Skills: Adaptability, Communication, Critical Thinking, Problem-Solving, Interpersonal Skills, Time Management, Creativity

WORK EXPERIENCE

FUTR AI | Senior Frontend Software Engineer — Colombo, LK (Remote) | Jun 2026 – Present

- **Futr AI is a VC backed tech start-up with the mission of delivering superpowers to support teams everywhere. From out of hours self-serve chatbots to making live chat agents instantly multilingual on any social or chat channel, Futr's superpowers are transforming the way organisations serve their audiences.**
- **Project - Futr AI Chat Widget**: an embeddable, white-label AI chat/live-chat widget built as a Blazor WebAssembly (.NET 9, C#) SPA, shipped as an iframe-embeddable third-party widget (Intercom/Drift-style embed) with AI bot chat, live-agent handover, video calling and rich messaging.
  - ★ Live Chat & Video Calling
    - Built the SignalR-based live chat handover feature end-to-end, covering the bot-to-human transition flow, live-chat message types and answer/action handling in a new client-side chat service.
    - Delivered the Azure Communication Services video calling integration end-to-end, including a JavaScript-interop layer over the ACS calling SDK, the video-call UI panel and the underlying call-session service.
  - ★ Widget Configuration & Content
    - Designed a forward-compatible host-embed configuration channel, carrying a structured configuration payload alongside the widget's existing query parameters so any current or future host-page option reaches the widget without repeated two-sided code changes.
    - Migrated multiple widget sections (About Us, Notifications, Connect Channels, Welcome panel) from static catalogs to live backend-driven content, each with a dedicated content service.
  - ★ Messaging, Accessibility & QA
    - Extended the quick-reply/message-actions system (feedback, metadata, typing indicators) and reworked the composer and message list to support richer message types.
    - Added the accessibility panel (font size, contrast, visitor-facing controls); diagnosed and fixed a pre-chat form pre-fill bug by tracing a branching issue across bot-driven vs. client-driven code paths.
    - Implemented button "lockdown" support and audited Bot Framework-style action handling (in-chat replies, external links, URL redirects and chat initiation) across the Blazor widget and the team's React-based widgets to identify and close behavioural gaps.
- **Technologies & Tools :** Blazor WebAssembly, .NET 9, C#, SignalR, Azure Communication Services, REST APIs, JavaScript Interop, CSS
- **Methodology :** Agile/Scrum

FUTR AI | Senior Frontend Software Engineer — London, UK | Apr 2026 – May 2026

- Role Transition
  - ★ Promotion & Transition
    - Promoted to Senior Frontend Software Engineer in recognition of technical leadership and delivery, continuing front-end work on Futr AI's existing chatbot and web admin portal.
    - Handed over day-to-day front-end delivery ahead of transitioning to an independent contractor engagement with Futr AI in June 2026.

FUTR AI | Full Stack Software Engineer — London, UK | Feb 2023 – Mar 2026

- Projects Involved - Chat Bots + Web Admin Portal
  - ★ Front End Contributions
    - Collaborated on a comprehensive site rebuild, focusing on user agent settings and live chat features for the user chat bot.
    - Specialized in a data-driven site, handling server data manipulation.
    - Developed key features, like webSockets (Microsoft Signal R) and implemented live video chat using the Microsoft Azure Communication Services (ACS).
    - Revamped code-base significantly and implemented substantial refactoring in the chat bot system, concurrently executing extensive UI/UX enhancements with a primary focus on improving accessibility features.
    - Effort to white-label the product, utilizing Material-UI for a consistent and customizable user interface.
    - Directed and led a team of FrontEnd engineers, overseeing collaborative efforts to achieve project objectives and ensuring the successful execution of tasks in alignment with organisational goals.
  - ★ Back End Contributions
    - Code and debug systems written mostly in Typescript and C# in the server-side with frameworks such as NodeJS and ASP .Net. Aside from the usual client-server infrastructure.
    - I have also worked with conventional infrastructures like Backend-for-Frontend and server-side rendering depending on system requirements.
  - ★ AI Agents Development
    - Built and deployed AI agents using Azure AI Foundry to handle customer service workflows with minimal human intervention.
    - Developed intelligent agent systems that dynamically route conversations based on context, intent, and customer needs.
    - Implemented conversational agents with custom prompting strategies using Azure AI Foundry, ensuring accurate and contextually relevant responses.
- **Technologies & Tools :** React, Typescript, Node.js, C#, WebSocket, Serverless, Azure, Material UI, Jest
- **Methodology :** Agile/Scrum
- **Clients :** Rail Europe, Chancellors, Norfolk Police, Suffolk Police, AWIN, BiPolar, Superdrug

AVONET TECHNOLOGIES | Senior Software Engineer — Colombo, LK | Oct 2022 – Dec 2022

- Projects Involved - Rail Online Mobile App
  - Developed a mobile application for comparing, planning and booking train tickets across Europe, UK, US, and Canada with leading rail operators.
  - Built cross-platform UI screens in React Native for iOS and Android from a single codebase, integrating REST APIs for live fares, schedules and seat availability.
  - Integrated Stripe for secure in-app payments and implemented end-to-end ticket checkout and booking-confirmation flows.
  - Handled app release management, including versioning, build configuration and submissions to the Apple App Store and Google Play Store.
- **Technologies & Tools :** ReactNative, Node.js, TypeScript, AWS, Serverless, DynamoDB, Stripe
- **Methodology :** Agile/Scrum

AVONET TECHNOLOGIES | Software Engineer — Colombo, LK | Jan 2021 - Sep 2022

- Projects Involved - Greg Mobile App + Web Admin Portal
  - Built a social fitness platform connecting users through physical activities and events based on interests and location. Developed mobile app and admin portal for master data management.
- **Technologies & Tools :** ReactNative, ReactJS, Node.js, TypeScript, AWS, Serverless, DynamoDB, GraphDB, OpenSearch, Stripe, Twilio
- **Methodology :** Agile/Scrum
- **Links :** Greg Mobile App.
- Projects Involved - Greenhouse Web + Web Admin Portal
  - Developed a web platform providing personalized recommendations and tools to help users reduce household energy costs and climate impact. Built admin portal for master data maintenance.
- **Technologies & Tools :** ReactJS, Node.js, TypeScript, AWS, Serverless, DynamoDB
- **Methodology :** Agile/Scrum
- **Links :** Greenhouse Web.

AVONET TECHNOLOGIES | Associate Software Engineer — Colombo, LK | Apr 2019 - Dec 2020

- Projects Involved - Affiniti DMS
  - Developed a delinquency management platform for credit monitoring and debt recovery processes, ensuring timely delivery while maintaining quality standards.
- **Technologies & Tools :** Java, JEE, Spring Boot, Spring MVC, Spring MicroService, MySQL, JavaScript, jQuery, Python
- **Methodology :** Agile/Scrum

AVONET TECHNOLOGIES | Software Engineer Intern — Colombo, LK | Sep 2018 – Apr 2019

- Projects Involved - Affiniti CRM
  - Built a customer relationship management platform for tracking customer and sales leads, delivering a quality product on time.
- **Technologies & Tools :** Java, JEE, Spring MVC, MySQL, JavaScript, jQuery
- **Methodology :** Agile/Scrum

EDUCATION

BSc (Hons) in Software Engineering — Plymouth, UK | Jun 2018
University of Plymouth
Classification: Second Class Honours (Lower Division)

Diploma in Information Technology with E-Commerce — Colombo, LK | Mar 2014
Esoft Metro Campus
Classification: Grade A

Certificate in Applied Information Technology (CAIT) — Colombo, LK | Nov 2013
Sri Lanka Telecom Training Center
Classification: Grade A
